Please call us if you have any questions or need special assistance. We look forward to welcoming you to our office.

Elman Retina Group, P.A.

Dear Patient:

We look forward to welcoming you to our practice. At the Elman Retina Group you'll receive the most expert and empathetic care possible. We are deeply committed to offering you comprehensive, state-of-the-art treatments, based on the most current scientific research and technology, in a warm and caring private office setting.

What to Expect

When you arrive at our office, you may find the reception area full of people. Please don't worry. Not all of these people are patients. Many of our patients require family or friends to accompany them. Not everyone may be there for the same type of visit and testing.

Due to the nature of the retina examination and ancillary testing, please expect to spend between two to four hours for a typical new patient visit. Follow-up visits generally are briefer.

At each visit, you can expect to be given dilating drops. While some people can drive after a dilated eye examination, it is best to have someone else drive you home when possible.

Please bring a list with you of prior surgeries, prescription medications you are taking, and your eye glasses.

What is a Retina Specialist?

A retina specialist is an Eye M.D. especially trained to deal with the problems affecting the delicate tissues in the back of the eye, such as the macula, retina and vitreous. The retina lines the back of the eye and "takes the picture" for the eye much like the film in a camera. The center of the retina, called the macula, is responsible for our fine central vision and allows us to read, recognize faces and thread a needle. The cavity in front of the retina and filling most of the eye contains the clear vitreous gel. Our retina specialists, Dr. Elman and Dr. Leder, completed two extra years of rigorous, specialized fellowship training after finishing their ophthalmology residencies. They are internationally acclaimed and uniquely qualified to diagnose and treat problems in the back of the eye, such as macular degeneration, diabetic retinopathy and retinal detachment.

Dr. Elman or Dr. Leder will evaluate and treat your retinal problems working in consultation and in partnership with your referring doctor. Your general ophthalmologist or optometrist will continue to see you for glasses and other non-retina related eye conditions. Your referring eye doctor and medical doctors will receive complete notes of each office visit to our office.
